

NORTHERN STATES POWER | SEASONAL RESOURCE ADEQUACY CAPACITY

MINNESOTA / MISO • SEASONAL CAPACITY • RFP ID: NSP SUMMER 2027

|                  |                    |                       |              |
|------------------|--------------------|-----------------------|--------------|
| PROCUREMENT SIZE | RESOURCE TYPE      | TARGET COMMENCEMENT   | BID DEADLINE |
| NOT DISCLOSED    | MISO SEASONAL ZRCs | 2027/28 PLANNING YEAR | 23 OCT 2026  |

01 | PROCUREMENT OVERVIEW

|                       |                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------|
| Procuring Entity      | Northern States Power Company, a Minnesota corporation and Xcel Energy operating subsidiary           |
| Resource Requirements | MISO seasonal ZRCs for 2027/28; alternative long-term capacity structures also considered             |
| Eligible Geography    | MISO LRZ 1 preferred; other MISO LRZs considered with source-zone identification and settlement terms |
| Delivery Requirements | Confirm transfer timing and that offered ZRCs are transferable to NSP through MECT                    |

02 | COMMERCIAL & CONTRACTUAL TERMS

|                       |                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Transaction Structure | Seasonal ZRC purchase; longer-term seasonal commitments, identified-resource capacity, or other proposed structures                  |
| Contract Tenor        | One or more 2027/28 seasons; long-term offers may begin in 2027/28 or later and extend up to 5 years                                 |
| Key Commercial Terms  | Aggregate target not disclosed. 10 MW minimum; preferred summer/fall 25-300 MW, winter/spring 25-75 MW; long-term preferred 25-75 MW |
| Credit & Security     | Creditworthiness is evaluated; collateral requirements are not stated. Contracts may require NSP Board and regulatory approvals      |

03 | ELIGIBILITY & TECHNICAL REQUIREMENTS

|                        |                                                                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Project Readiness      | No separate readiness threshold stated; resource-backed long-term offers must identify the generation resource and proposed structure    |
| Interconnection Status | No interconnection milestone stated; ZRC transferability through MECT is required                                                        |
| Technical Criteria     | State Planning Year, season, MW, LRZ, term, price, material conditions, package dependencies, zonal treatment and transfer timing        |
| Material Restrictions  | Offers may be seasonal or packaged. NSP may reject any offer or select other than the lowest-cost offer; bidder costs are not reimbursed |

04 | CRITICAL DATES & SUBMISSION

|                              |                                                                                                |
|------------------------------|------------------------------------------------------------------------------------------------|
| Intent to Bid / Registration | Not required; no NOI, NDA, bidder conference, fee or prequalification gate is stated           |
| Clarifications / Q&A         | Questions due 19 Oct 2026   5:00 p.m. MDT                                                      |
| Proposal Submission          | Proposals due 23 Oct 2026   5:00 p.m. MDT; negotiations follow; contracts anticipated Nov 2026 |
| Submission Portal            | Email proposals and questions to Xcel-COMOPS-RFP@xcelenergy.com                                |

05 | HOW SUNSTRIPE CAN SUPPORT

|                                                                                                                                                                                                                 |                                                                                                                                                                                                           |
